

Providing Premium Quality Products Begins with Using Quality Name Brand Components Including:

EATON

MERITOR

NTN | BOWER

ULT strives to provide the best quality remanufactured products available and that begins with using premium quality branded components. Bearings are a critical component in all our products, and using the right bearings will help ensure proper performance and long life maintenance free operation. That's why ULT only uses OE bearings or NTN "Case Hardened" bearings.

ADVANTAGES OF CASE HARDENING

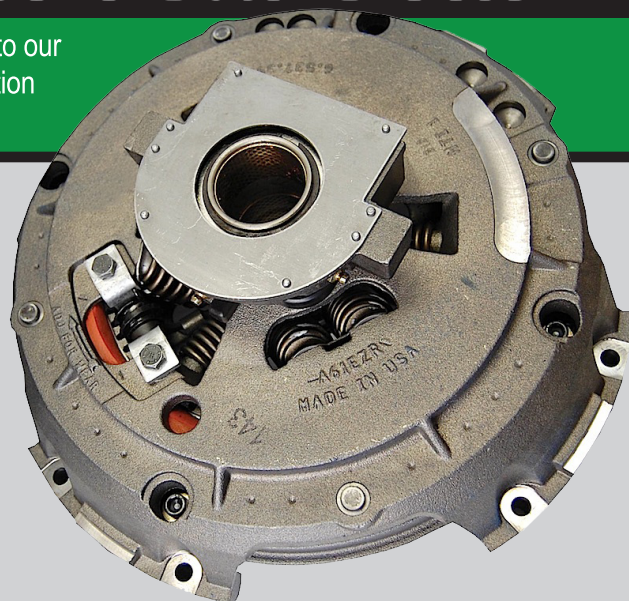

- The combination of a hard surface and a relatively pliable inner core give case hardened steel superior crack and fracture resistance under shock loads
- Case hardened steel offers 40% longer life than through hardened steel
- The ductile core is advantageous under misalignment conditions
- Case hardened steel is the recognized standard for tapered roller bearings

We Give Our Customers the Option of Clutch Choices

ULT offers both Premium Eaton or Euclid clutch options as a courtesy to our valued customers. Both clutch options deliver more comfortable operation for the driver and a better bottom line for your fleet.

ADVANTAGES OF PROVIDING EATON OR EUCLID CLUTCHES

- All clutches utilize disc springs that are treated using a unique cryogenic process
- Every Clutch uses a sealed throwout bearing, providing increased lubrication intervals and longer clutch life
- All clutch components meet design and quality specifications to help ensure long service life and outstanding performance
- Clutches are supplied as matched units, allowing for better production process control and warranty analysis
